

# **Progress Review and Work Plan**

**Jude Obidiegwu**

National Root Crops Research Institute Umudike Nigeria

**16<sup>th</sup> September 2022**

**Primary Outcome 1. Enhanced capacity for more efficient and effective yam breeding in NRCRI Nigeria**

**Mr Jerry Nwogha:** PhD Candidate at Jimma University, Ethiopia

**Course of study:** Plant breeding

**Project topic:** Metabolomics and transcriptomics profiling of genes implicated in tuber dormancy regulation in white yam (*Dioscorea rotundata* poir)

**Mrs Eluwa Eunice:** PhD Candidate at Michael Okpara University of Agriculture, Umudike

**Course of study:** Plant breeding and genetics.

**Project topic:** Agro-morphological and Molecular characterization of some *Dioscorea bulbifera*

**Mr Anthony Udeagbara:** MSc. Candidate at Michael Okpara University of Agriculture, Umudike.

**Course of study:** Plant breeding and genetics.

**Project topic:** Profiling of Nigerian yam landraces using morphological, genetic and postharvest markers.

**Mr Paul Umezinwa:** MSc. Candidate at University of Nigeria, Nsukka.

**Course of study:** Plant Genetics and Breeding.

**Project topic:** Morphological and food quality evaluation of some advanced yam breeding clones.

# Training/Meeting

- AfricaYam/RTBfoods training on yam quality evaluation- ***3 personnel attended***
- Data collection and analysis training organized for NRCRI yam breeding team
- Team building workshop
- Product advancement workshop

## Conferences/workshops presentation (2021)

- On farm evaluation of pre-released water yam (*Dioscorea alata*) genotypes for farmer preferred sensory and tuber qualities. – *Okereke et al.*
- Functional qualities of bitter Yam (*Dioscorea dumetorum*): A Review. – *Ano et al.*
- Assessment of formal seed yam system in Abia state: A value chain thinking approach. – *Nwaekpe et al.*
- On-farm evaluation of selected pre-release white yams (*Dioscorea rotundata*) genotypes for disease resistance and agronomic performance in some Nigeria agro-ecozones. – *Nwadili et al.*
- Evaluation of selected pre-release water yam (*Dioscorea alata*) genotypes for disease resistance and agronomic performance in some Nigeria agro-ecozones. – *Nwadili et al.*

## **Establishment /Installation of Semi-Autotrophic Hydroponics (SAH) infrastructure**

- The facility for Semi-Autotrophic Hydroponics (SAH) for yam at NRCRI, Umudike has completed and commissioned by the management.

Semi-Autotrophic Hydroponics (SAH) building at NRCRI, Umudike.

## Status of traditional yam barn

NRCRI, Umudike Traditional yam barn is still maintained

## Status of modern yam barn

Back view

Front view

## Status of screen houses

- Reinforcement of foundation edges
- Renetting of damaged areas
- Re-roofing of the entire screen house

## Exchange visits

- AfricaYam in NRCRI hosted a number of work partners in the year 2021/2022
- Dr. Agrey Paterny and Mr. Alex Edemodu visited for inspection and sample collection.
- Our field trials in Umudike and Akwa Ibom states were visited.

**Primary Outcome 3. Next-generation of superior  
yam varieties for traditional and emerging  
products/markets.**

# **Analysis of farmers' preferred yam attribute**

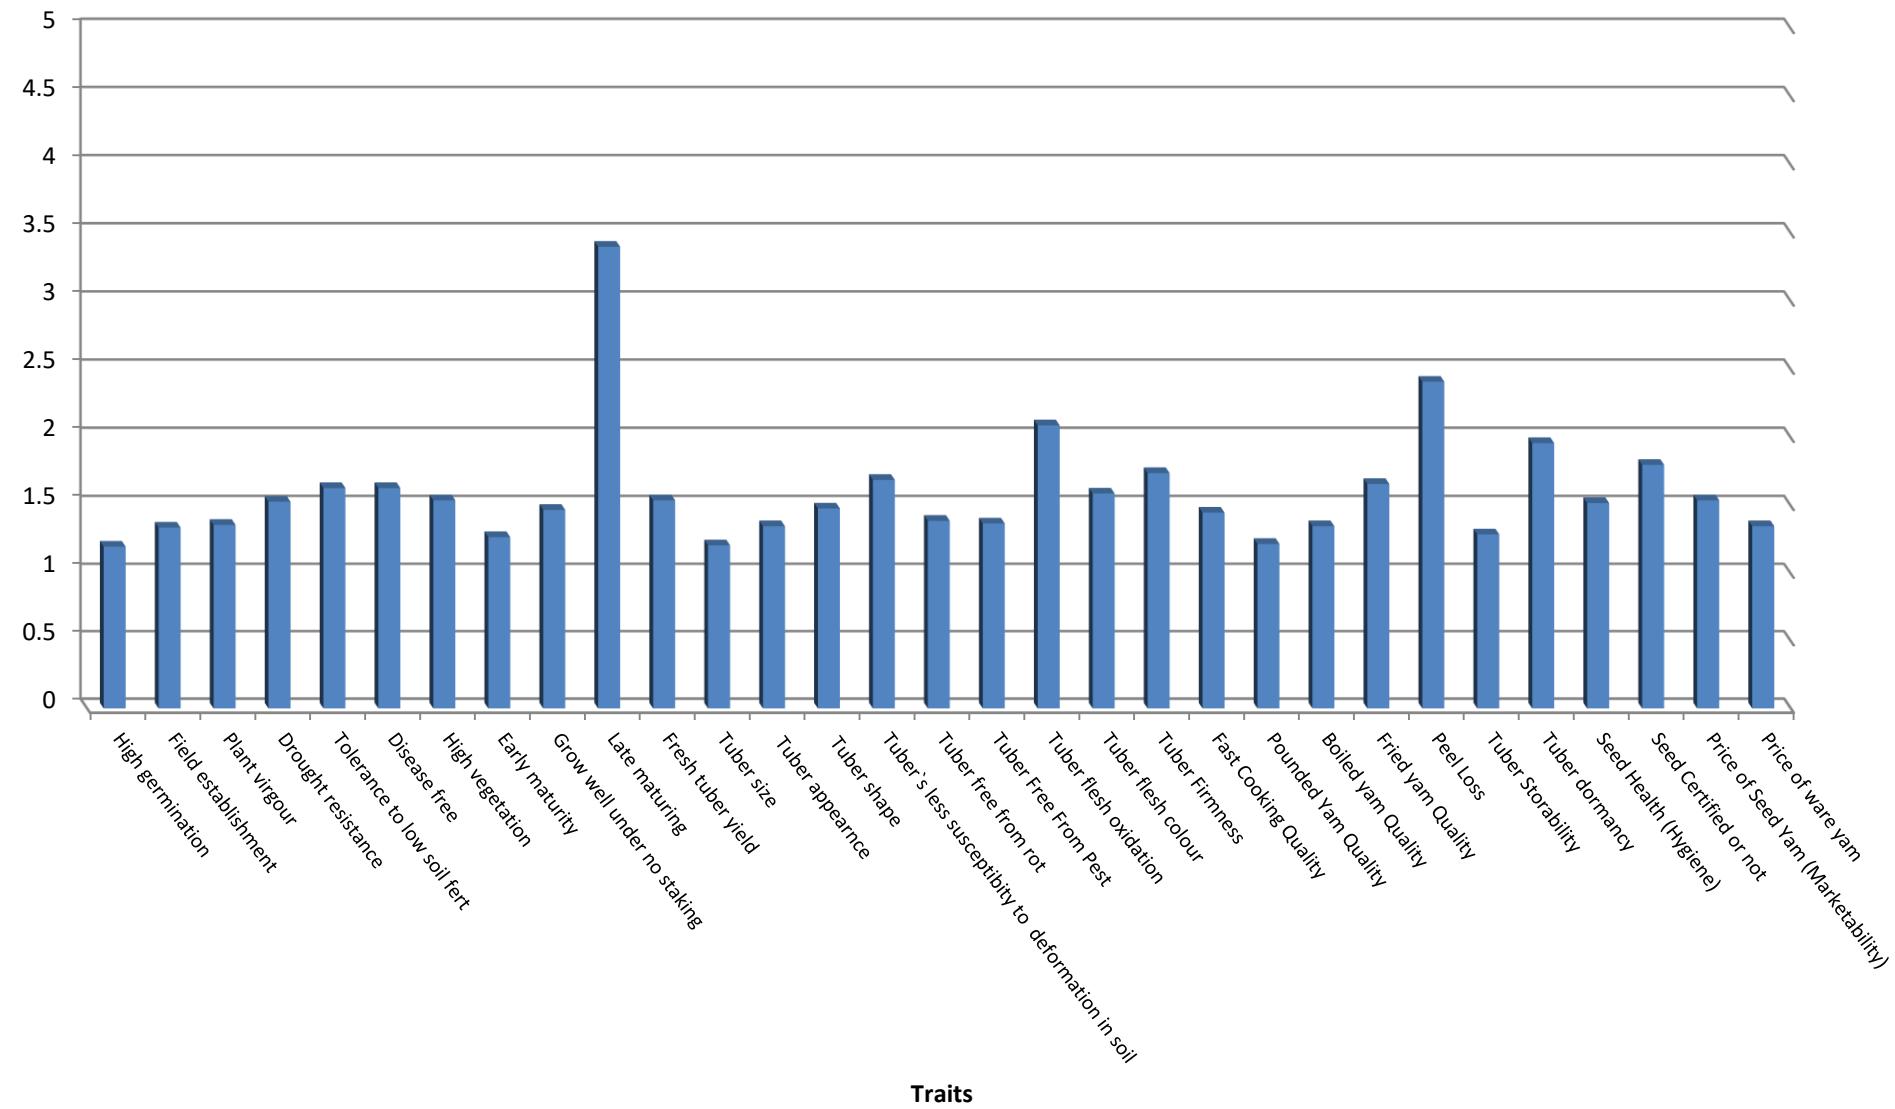

A household survey was conducted in Nigeria as part of the deliverables

The survey was designed to elicit information from farmers on preferred yams and attributes

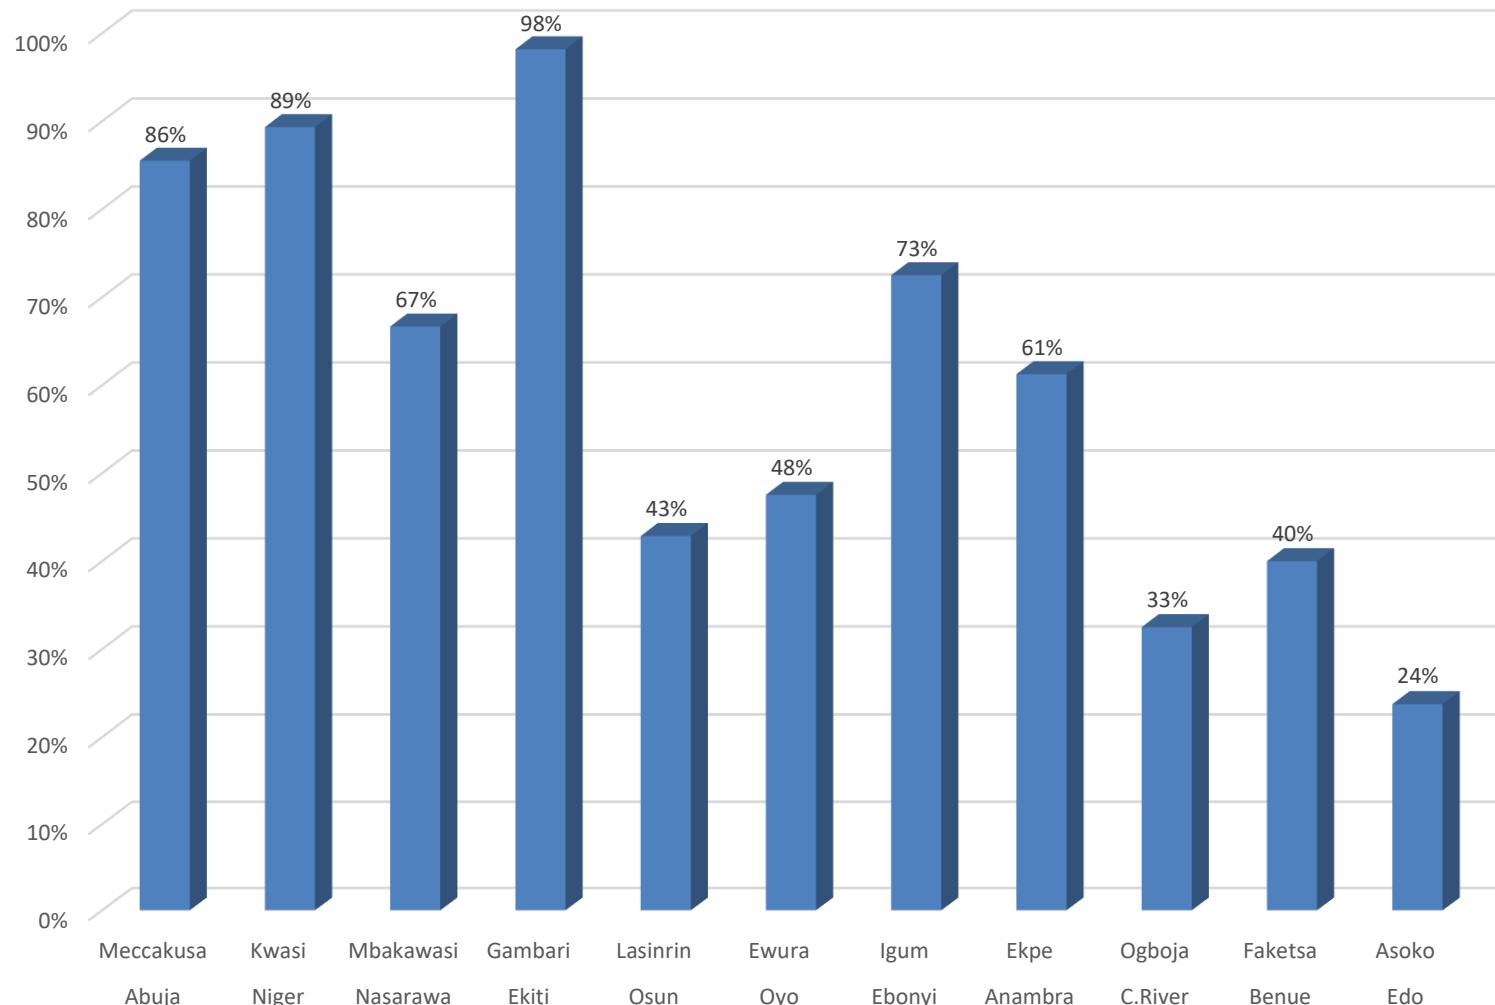

A multi-stage random sampling technique was adopted in selecting the farming households from the ten states namely Anambra, Ebonyi, Cross River, Edo , Benue , Oyo, Ekiti, Osun, Nasarawa, Abuja and Niger.

Eighty (80) households were sampled per state

# Trait perceptions

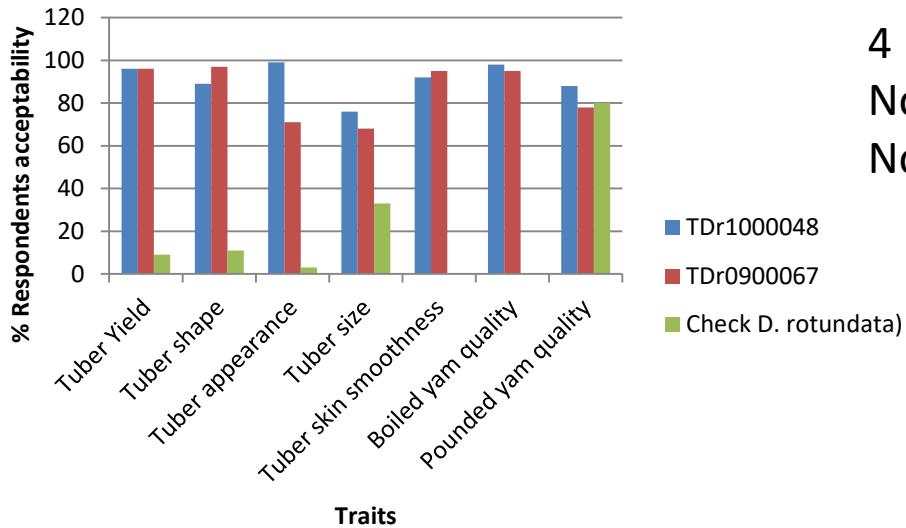

## Most preferred cultivars across sampled states

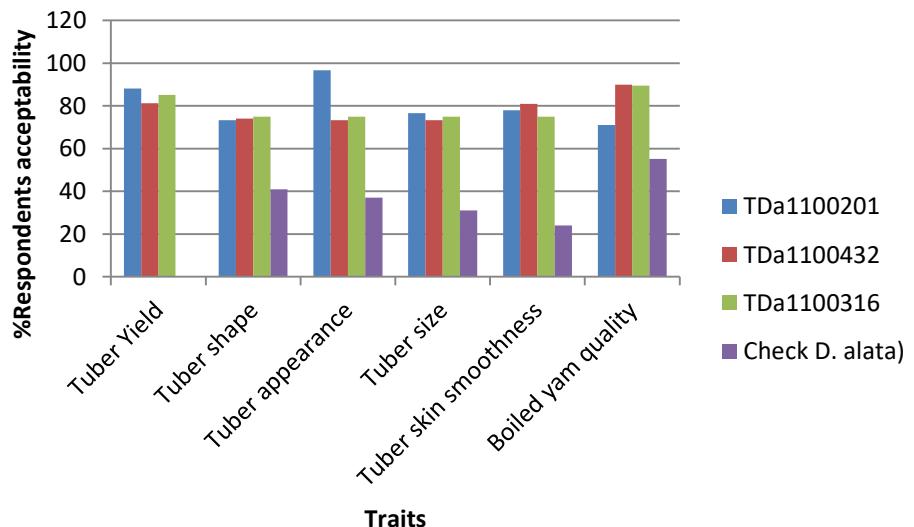

# Demand Creation Trial

## *D. rotundata*

4 locations= *Umudike, Uyo, Igbariam, Otobi*  
No of farmers = **100**  
No varieties = **5**

## *D. alata*

# Visit to DCT trial sites

## Summary of *D. rotundata* of crossing blocks

## Clonal evaluation of *D. rotundata* candidates

- Three hundred and seventy six (376) clones of *D. rotundata* weighing 20grms were all planted in an unreplicated trial at the NRCRI experimental field.
- The planting date - 6 June, 2021
- These clones were planted one per stand at 25cm X 25cm. All the agronomical practices were done.
- The plants were phenotyped for plant vigor, tuber yield, tuber shape, tuber colour and reactions to disease
- **68 clones** which represented 18.09% were selected for PPT.

## Clonal evaluation of *D. alata* candidates

- Seventy (70) *D. alata* weighing 20grms were all planted in an unreplicated trial at the NRCRI experimental field.
- The planting date – 10 June 2021
- These clones were planted one per stand at 25cm X 25cm. All the agronomical practices were done.
- The plants were phenotyped for plant vigor, tuber yield, tuber shape, tuber colour and reactions to disease
- **41 clones** representing 58.6% were advanced

## Overview of preliminary performance trial of *D. alata* clones

- Sixty four (64) genotypes of *D. alata* were planted in NRCRI, Umudike
- Each genotype was planted in a plot of 2m x 3m comprising 6 stands per plot with a spacing of 0.5m x 1m.
- The yams were phenotyped for stand count, plant vigour, yam anthracnose disease, yam mosaic disease, tuber yield, tuber shape, dry matter, tuber oxidation, tuber colour, and reaction to post-harvest diseases.
- **30 *D. alata*** clones selected from 64 accessions planted in 2021 cropping to be advanced to AYT

## **Overview of preliminary performance trial of *D. rotundata* clones**

- Fifty four (54) genotypes of *D. rotundata* were planted in NRCRI, Umudike
- Each genotype was planted in a plot of 2m x 3m comprising 6 stands per plot with a spacing of 0.5m x 1m.
- The yams were phenotyped for stand count, plant vigour, yam anthracnose disease, yam mosaic disease, tuber yield, tuber shape, dry matter, tuber oxidation, tuber colour, and reaction to post-harvest diseases.
- **30 *D. rotundata* clones** selected from 54 clones planted in 2021 cropping to be advanced to APT

## **Multi locational trial (MLT1,MLT2,MAFF) of *D. rotundata* in 2021**

- Fourteen (14) genotypes comprising of pre-release *D. rotundata* and *D.alata* genotypes and two checks (one national and one local) were planted Umudike, Uyo, Igbariam and Nsukka.
- The trials were planted on 23rd April, 2021 in Umudike, 4th May, 2021 in Essien Udim, 10th June, 2021 in Igbariam, and 20th May, 2021 in Nsukka.
- The trial was laid out in RCB design with three replications.
- The dimension of the experimental area in each of the location was 32mx26m (832m<sup>2</sup>) with 48 plots.
- Each replicate contains 16 plots representing 16 *D. rotundata* genotypes.
- Forty eight planting yam setts each weighing 150g per set was cut from each genotype and planted in the three replicates with a spacing of 1 m x 1 m
- All necessary cultural practices were carried out.

## **Rationale for advancement of TDa1100374, TDr1401220 and TDr1400158 to on farm testing in 2022 cropping seasoning**

1. Yield performance across locations
2. Relative high dry matter content
3. Slow rate of tuber oxidation
4. High acceptance of the boiled and pounded food products

# **REGISTRATION AND RELEASE OF TDr1100497 (*favourite*) VARIETY IN NIGERIA**

Agre, P, Dekoeyer D, Adebola P, Asiedu R

# Multi-location trials establishment

## Materials and methods

- 19 *D. rotundata* clones that had been screened through seedling evaluation, clonal evaluation, preliminary yield trials and advanced performance trials.
- The trial design for *D. rotundata* across locations (listed below) was lattice with three replications in a plot size of 10 m<sup>2</sup>. The NCRP evaluation was conducted over a two-year planting season of 2016 and 2017.
- All standard agronomic procedures for yam production were observed.

### MLT sites:

- Ebonyi State (Abakiliki): Derived Savannah forest
- Abia State (Umudike): Rain Forest zone
- Oyo State (Ibadan): Rain Forest Savannah transition zone
- Edo State (Ubiaja): Rainforest agro zone
- Benue State (Makurdi): Southern Savannah
- Abuja FCT: Northern Guinea Savannah
- Anambra State (Igbariam): Derived savannah

## RATIONALE FOR CANDIDATE RELEASE

- Candidate **TD<sub>r</sub>1100497** expressed remarkable yield potential and adaptation to Guinea Savannah and Rain Forest agro-ecologies.
- Nutritional qualities of the candidate performed well compared to both local and standard checks.
- The candidate produced **high dry matter (35.9%) and starch (84.4%), potential tuber yield (32.7t/ha) and flour yields (39.8%)** when compared to the standard and local checks. These properties make it commercially attractive for various industries within the yam value chain.
- The candidate is a mid climber and can perform excellently well with medium/minimal staking.
- The clone was also preferred by farmers during on-farm testing, based on overall agronomic performance and sensory properties

## Tuber characteristics

Irregular shape, brown skin  
and rough surface

Creamy white flesh colour

## Leaves and petiole characteristics

Young leaves

Pale green

Older leaves

Dark green

Petiole characteristics

Purplish green with  
dark green pulvinus  
(base where leaf and  
petiole connect)

Vine characteristics

Green, mid-climber  
with anti clockwise  
twinning

# **Work plan 2022**

## **Evaluation/ Trials**

1. Establishment of crossing blocks
2. Seedling Nursery evaluation
3. Clonal evaluation
4. PPT
5. APT
6. NPT
7. On- farm trials

## **Variety release**

2 candidates = 1 *D. alata* + 1 *D. rotundata*
